After adding a package, e.g. MarketData, with:

```
Pkg.add("MarketData")
```

which also installs dependencies:

```
INFO: Installing BufferedStreams v0.4.0
INFO: Installing Codecs v0.4.0
...
```

how can I remove or uninstall the package and all its dependencies?

julia   packages

From the [documentation](#):

```
Pkg.rm("MarketData")
```

rm(pkg)

Remove all requirement entries for `pkg` from `Pkg.dir("REQUIRE")` and call `Pkg.resolve()`.

This also removes dependencies:

```
INFO: Removing BufferedStreams v0.4.0
INFO: Removing Codecs v0.4.0
...
```

1   Users may also want to run `pkg> gc` to clean up removed packages from the `packages` directory. Also note, this step does not remove content from the `dev` or `compiled` folder. They must be deleted manually (after `free` has been run). – Colin T Bowers Mar 25 '19 at 10:45 ✏
